

STAT 153 Project Checkpoint 1

Assigned: February 4, 2021

Due: February 10, 2021, by 11:59pm

For the first project checkpoint, you will be graded on three things:

1. Submitting a PDF file (Gradescope only accepts PDF's, so this is straightforward)
2. Start a professional report. Just a heading with your name, the date, and an appropriate title will suffice for now.
3. Include a time series plot of your chosen dataset. It would be even better to include a caption and professional formatting as shown in the provided templates, but only the plot itself is required for this check point.

The purpose of this Checkpoint is to have begin the report process by choosing a dataset, reading it into R/other software, creating a plot, putting it on a document, and begin the professional formatting with your name/date/title. This way we will also tackle basic PDF compilation issues early in the semester!
